RATIONALE

Diabetes Mellitus constitutes a prevalent chronic ailment, bearing a substantial social burden, given its adverse impact on the quality of life for those affected.

Indeed, chronic complications of diabetes, specifically cardiovascular and renal complications, are prevalent among individuals lacking proper disease control and can markedly contribute to mortality. Hence, meticulous diabetes management is fundamentally crucial for the prevention of complications. In this context, understanding of diabetes has markedly advanced in recent decades, accompanied by a notable expansion of therapeutic avenues through a succession of innovative drugs that afford optimal glycometabolic compensation and, in certain instances, substantial cardiovascular and renal protection. Concurrently, home monitoring has experienced significant enhancement in recent years, facilitated by the introduction of novel technologies for self-monitoring. The conference scheduled to take place in Palermo from June 6 to 8, 2024, represents the 2024 Annual Congress of the Central Europe Diabetes Association (CEDA), a European scientific society with a 55-year history dedicated to supporting diabetic patients.

This conference endeavors to furnish the Italian and European medical community with optimal insights into diabetic pathology, fostering an improved approach to the daily clinical management of diabetic patients. Through such endeavors, it seeks to ensure a prolonged and healthy life for individuals with diabetes by mitigating the risk of complications.

The faculty comprises preeminent European experts specializing in diverse domains within diabetology, including associated clinical conditions such as obesity, dyslipidemia, kidney diseases, and cardiovascular disorders.
